

Expansion module Delta Sprut

Delta Sprut expansion module allows to connect PCIe devices to the server additionally.

Each module allows you to save up to 4 video cards in HHHL format and up to 2 FHFL formats, interconnected by the NVLink interface.

Using Delta Sprut allows you to solve problems with artificial intelligence, employment for 3D VDI, machine learning, resource-intensive computing and big data analysis.

Interface and number of connectors	4x PCIe x16
Expansion card size	2x FHFL или 4x HHHL
PCIe version	4.0
Zoning	Up to 4 hosts
Nutrition	From the centralized busbar OCP 12V
Number of fans	2x
Weight	~6 kg
